

The earthquake resisting construction achievement rate

The earthquake resisting construction achievement rate of ICU's buildings is 96.84% as of September 1, 2019.

*As for the area of the buildings where the earthquake resisting construction is not yet implemented, the work will be completed by June 2020.

The earthquake resisting construction achievement rate is calculated based on the data in "Survey on private school buildings" (by Promotion and Mutual Aid Corporation for Private Schools of Japan) .

Calculation method:

$$(1 + 2) \div 3 = \text{The earthquake resisting construction achievement rate}$$

- 1 . Floor space of the buildings that were constructed after July 1, 1981: 49,638 m²
- 2 . Floor space of the buildings that were constructed before June 30, 1981, and has earthquake resisting capacity: 39,742 m²
- 3 . Total floor space: 92,296 m²
